(a) latency against arithmetic cost
Spearman rho = +0.88 (pooled)
compact Kendall tau = +0.42
standard Kendall tau = +0.56
MACC orders the pair wrongly in 23/90 (26%)
compact 13/45, standard 10/45
dashed: least-squares fit of latency on MACC, linear
in the raw variables, so it curves on these axes
