(A) does arithmetic cost predict latency?
Spearman rho = 0.81
mis-ordered pairs: 150/780 (19%)
measured latency (ms)
1000
10
arithmetic cost (million MACC)
(B) which method runs faster for the same bytes?
circle = UC-128, square = C-256
M1 FCN-1D
M2 ResNet-1D
M3 TCN
M4 MobileNetV2
M5 ShuffleNetV2
M6 GhostNet
M7 MobileNetV3
M8 FasterNet
M9 RepViT
M10 MobileNetV4
joint faster
